WOODROW WILSON CENTER UPDATE ON THE AMERICAS

# DRUG TRAFFICKING AND ORGANIZED CRIME IN THE AMERICAS:

## MAJOR TRENDS IN THE TWENTY-FIRST CENTURY

### INTRODUCTION

What are the major trends that have characterized the evolution of illicit drug trafficking and organized crime (organized criminal networks) in the Americas over the last quarter of a century? What have been the principal transformations or adaptations – economic, political, and organizational - that have taken place within the region’s vast illegal drug economy during the first decade of the twenty-first century? This essay identifies eight key trends or patterns that typify the ongoing transformation of the drug trade and the organized criminal groups it has spawned as of mid-2011. They are: 1) The increasing globalization of drug consumption; 2) The limited or “partial victories” and unintended consequences of the U.S.-led ‘war on drugs,’ especially in the Andes; 3) The proliferation of areas of drug cultivation and of drug smuggling routes throughout the hemisphere (so-called “balloon effects”); 4) The dispersion and fragmentation of organized criminal groups or networks within countries and across sub-regions (“cockroach effects”); 5) The failure of political reform and state-building efforts (deinstitutionalization effects); 6) The inadequacies or failures of U.S. domestic drug and crime control policies (demand control failures); 7) The ineffectiveness of regional and international drug control policies (regulatory failures); and 8) The growth in support for harm reduction, decriminalization, and legalization policy alternatives (legalization debate).

By  
**BRUCE BAGLEY\***

### THE GLOBALIZATION OF DRUG CONSUMPTION

Many Latin American political leaders have long argued that if the U.S. population did not consume such large quantities of illegal drugs – if there were not so many American drug addicts and users – then Latin American and Caribbean countries would not produce such large quantities of illegal drugs like marijuana, cocaine, and heroin for export and the region would not be plagued by the powerful and well-financed drug trafficking organizations – often called cartels

\*Professor and chair of the Department of International Studies at the University of Miami

– that have sprung up throughout the hemisphere over the last twenty-five years plus.<sup>1</sup> It is certainly accurate to claim that the United States has been for decades, and remains today, the largest single consumer market for illicit drugs on the planet. Although there is no definitive estimate, the value of all illicit drugs sold annually in the United States may reach as high as \$150 billion. Some \$37 billion per year may be spent on cocaine alone.<sup>2</sup>

Nonetheless, illegal drug use (and/or addiction) is not a uniquely “American” disease, despite the title of David Musto’s pioneering book on the origins of drug control in the United States.<sup>3</sup> Over the last decade, the now-27 countries of the European Union have increased from 4.3 to 4.75 million cocaine users, which represent 30 percent of the worldwide consumption in cocaine. Europeans are almost closing the gap with the approximately five million regular cocaine users found in the United

States.<sup>4</sup> Indeed, levels of cocaine use in the United States have dropped steadily since the early 1990s while cocaine consumption in Europe exploded exponentially during the first decade of the twenty-first century. In fact, the number of cocaine users in the four European Free Trade Area and 27 EU countries doubled from 1998 through 2006.<sup>5</sup> Moreover, the Europeans pay more than twice as much per gram, ounce, kilo, or metric ton as do American consumers. The United Nations Office on Drugs and Crime (UNODC) 2011 report estimated that combined, the Americas consumed 63 percent of the world’s cocaine supply, 440 metric tons, while the European population consumed 29 percent. However, cocaine consumption in the United States has decreased by 40 percent from 1999 to 2009.<sup>6</sup> The global heroin market is quite complicated in terms of the supply chain. Afghanistan leads the world in heroin production, producing 380 metric

**THE LATIN AMERICAN PROGRAM** and its institutes on Mexico and Brazil serve as a bridge between the United States and Latin America, providing a nonpartisan forum for experts from throughout the region and the world to discuss the most critical issues facing the Hemisphere. The Program sponsors research, conferences, and publications aimed at deepening the understanding of Latin American and Caribbean politics, history, economics, culture, and U.S.-Latin American relations. By bringing pressing regional concerns to the attention of opinion leaders and policymakers, the Program contributes to more informed policy choices in Washington, D.C., and throughout the Hemisphere.

Citizen insecurity poses a rising challenge to democratic governance and the exercise of citizenship throughout Latin America and the Caribbean. Homicide rates are among the highest in the world and citizens throughout the region cite crime, followed by unemployment, as the dominant concern of daily life. Transnational organized crime, including but not limited to narco-trafficking, exacerbates levels of violence, compromises state institutions, and undermines democratic quality and the rule of law. The Latin American Program fosters comparative research and dialogue among scholars and policymakers from throughout the Americas regarding local, national, and international public policies to address citizen insecurity and related efforts to strengthen institutions, the observance of human rights, and the rule of law. The Program also focuses special attention on the changing sub-regional dynamics of organized crime and explores ways to diminish its pernicious effects on governance and insecurity. The Latin American Program sponsors a blog on citizen security, <http://scela.wordpress.com>, which has become a key resource for citizens and public officials throughout the region.

We are grateful to the Open Society Foundations for its generous support of our work.

[www.wilsoncenter.org/lap](http://www.wilsoncenter.org/lap)

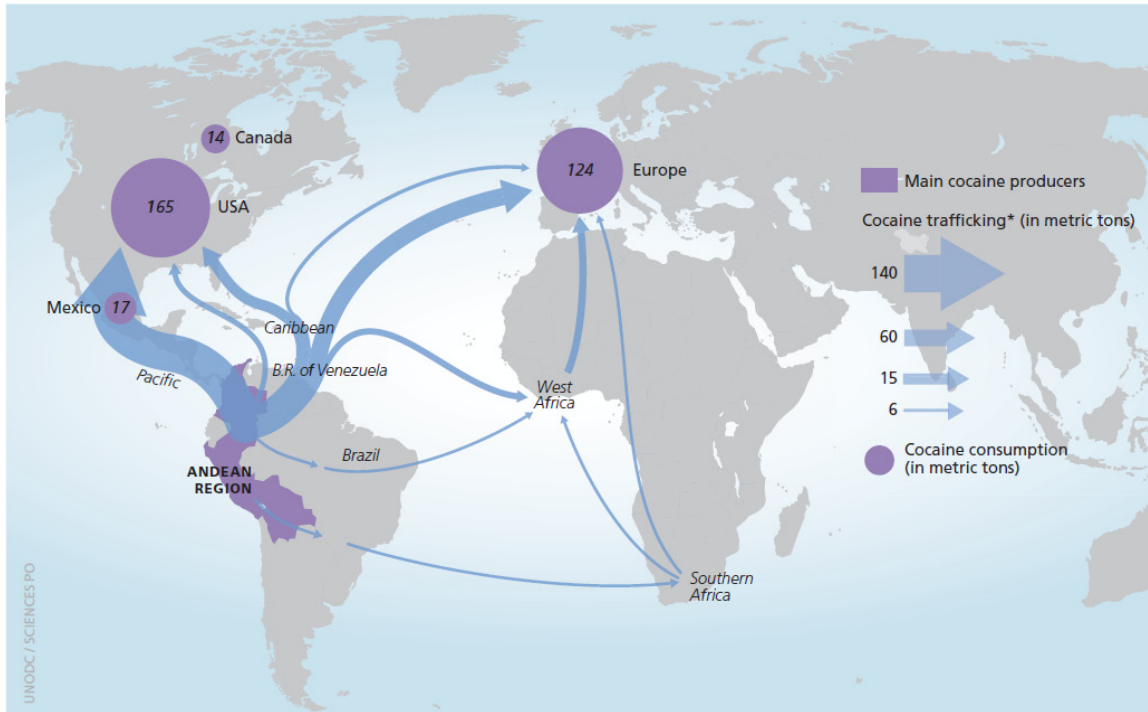

tons, or 83 percent of the world supply. It has been estimated that Afghanistan produced 6,900 tons of opium in 2009 alone.<sup>7</sup> With the exception of Latin America, the heroin produced from Afghanistan is trafficked to every major region around the world. Next, Mexico produces nine percent of the world heroin supply, while Myanmar produces five percent. The supply produced in Mexico is trafficked to the U.S. market. Colombia, on the other hand, only accounts for a single metric ton, which is less than one percent of the world supply of heroin. In terms of consumption, the UNODC 2011 report estimates that Central and Western Europe consumed 70 metric tons of heroin alone in 2009. People residing in Eastern Europe consumed even more heroin, approximately 73 metric tons in 2009. Over the last decade or more, the bulk of the heroin consumed in Europe has come from Afghanistan, whereas most of the heroin consumed in the United States has come from either Mexico (roughly 9 percent of world supply) or Colombia (roughly 0 percent of world supply).<sup>8</sup> Cocaine, in contrast, is produced in only three countries of the Western Hemisphere: Colombia (45 percent), Peru (35-40 percent) and Bolivia (15-20 percent). Cocaine is trafficked from these three Andean countries to 174 countries around the globe.<sup>9</sup> (See Map 1 below).

Cocaine consumption is not limited only to advanced capitalist markets such as those of the United States and Europe.<sup>10</sup> Cocaine use in Latin America has also skyrocketed over the last decade. For example, Latin American consumers in 2010 were estimated to absorb some 200 metric tons of cocaine. Because of the sheer size of its population, Brazil had the greatest number of users in South America.<sup>11</sup> The United Nations 2011 World Drug Report estimated that Brazil has 900,000 cocaine users. However, the prevalence of cocaine use among the general population in Argentina is reported to be 2.6 percent and, in Chile, 2.4 percent, a rate higher than Brazil's.<sup>12</sup> Cocaine consumption rates are quite high in other regions of the world. In 2009, Africa

had between 940,000 on the lower end and 4.42 million cocaine users on the higher end. During the same year, Asia had an estimated 400,000 cocaine users on the lower end and 2.3 million users on the higher end. Eastern and Southeastern Europe had less cocaine users in 2009 (310,000 on the lower end and 660,000 on the higher end).<sup>13</sup> The dramatic increases in European and South American cocaine consumption have greatly expanded world market demand for this illicit Andean product over the past decade. As a consequence, a pronounced trend toward the proliferation of new global trafficking routes and the increased involvement of criminal trafficking networks originating outside the Andean sub-region has become increasingly evident.

### **PARTIAL VICTORIES IN THE ANDEAN WAR ON DRUGS**

From the middle of the nineteenth century through the mid-1980s, Peru and Bolivia were the two principal country suppliers of both coca leaf and of refined cocaine to the U.S., European, and other world markets.<sup>14</sup> As of 1985, Peru produced roughly 65 percent of the world's supply of coca leaf while Bolivia produced approximately 25 percent and Colombia 10 percent or less.<sup>15</sup> The "partial victories" achieved by the U.S.-led "war on drugs" in the southern Andes during the late 1980s and early 1990s rapidly shifted coca cultivation in the region to Colombia in the mid- and late 1990s. The two "partial victories" responsible for the change were the U.S.-financed crop eradication programs in Bolivia's Chapare region under President Victor Paz Estensoro after 1986 (Operation Blast Furnace) and Presidents Hugo Banzer and Jorge Quiroga from 1998 to 2002 (*Plan Dignidad*), along with Peruvian President Alberto Fujimori's interruption of the "air bridge" between the Alto Huallaga coca region in Peru and the clandestine cocaine laboratories located in Colombia in the mid-1990s.<sup>16</sup> As a result, by 2000, Colombia cultivated an estimated 90 percent

Map 1. Major Global Cocaine Flows, 2008

Source: UNODC, *World Drug Report* (New York: UNODC, 2010), 70.

of the world's coca leaf, while production in Peru and Bolivia dwindled to historic lows.<sup>17</sup>

In the early 1990s, Colombia's U.S.-backed all-out war against drug lord Pablo Escobar and the Medellín cartel during the César Gaviria administration lead to Escobar's death on December 2, 1993, and the rapid dissolution of the Medellín cartel.<sup>18</sup> Subsequent plea bargaining in 1994-95 during the Ernesto Samper administration with the major drug lords of the Cali cartel, specifically the Rodríguez Orejuela brothers, catalyzed its dismantling.<sup>19</sup> While some large criminal trafficking networks (e.g., the Cartel del Norte del Valle) continued to operate in Colombia in the late 1990s and early 2000s, some 300 plus smaller drug trafficking organizations (known as *cartelitos*) surfaced to fill the vacuum left by the dismantling of the two major cartels in the political economy of Colombia's still highly profitable drug trade. By the

late 1990s, essentially as an unanticipated and unintended consequence of the demise of the country's major cartels, Colombia's left-wing *Fuerzas Armadas Revolucionarias de Colombia* (Revolutionary Armed Forces of Colombia, or FARC) guerrillas and right-wing *Autodefensas Unidas de Colombia* (United Self-Defense Forces of Colombia, or AUC) paramilitary militias took control of coca cultivation and processing throughout rural Colombia. Drug-related violence increased between these two armed illegal actors as each sought to eliminate the other and to consolidate its own territorial control over drug cultivation regions and the peasant growers across the Colombian countryside.<sup>20</sup>

As a direct result, levels of drug-fueled violence in Colombia spiraled out of control in the late 1990s and early 2000s. Indeed, during much of the first decade of the 2000s, Colombia became one of the most dangerous and violent countries in the world.

In July 2000, President Clinton and the U.S. government responded by backing the Andrés Pastrana administration in its war against runaway drug production and trafficking in Colombia via the adoption of Plan Colombia. In August 2002, the newly inaugurated government of Álvaro Uribe received additional drug war assistance from Washington and the administration of George W. Bush in the wake of the 9/11 terrorist attacks on the United States. Supported by almost \$8 billion in U.S. aid under Plan Colombia over the course of a decade, by 2010 Colombian President Uribe and his program of “democratic security” had managed to beat back the FARC guerrillas, demobilize many – but not all – of the country’s paramilitary bands, and substantially reduce the country’s astronomically high levels of drug-related violence.<sup>21</sup>

Despite the substantial achievements of Plan Colombia and the Uribe administration’s “democratic security” policies, as of 2010 Colombia remained a principal source of coca leaf and refined cocaine in the Andes, and drug-related violence and criminality appeared to be once again on the rise. The UNODC 2011 World Drug report states that the area used for cultivating coca in Colombia decreased by an estimated 15 percent in 2010, leaving Colombia just slightly ahead of Peru as the world’s largest coca leaf producer. In 2011, according to the UNODC, the area of coca cultivation in Colombia increased by three percent, although figures compiled by the U.S. government registered a decline. As of 2011, the area under cultivation in Colombia was estimated at 62,000 hectares, as compared with the 73,000 hectares reportedly under cultivation in 2009.<sup>22</sup> As an unintended consequence of the U.S.-backed “war on drugs” in Colombia, the locus of organized criminal involvement in cocaine trafficking gradually shifted northwards from Colombia to Mexico. Although the Uribe administration and the U.S.-backed Plan Colombia succeeded at least partially in Colombia in the war against cocaine traffickers, the major drug trafficking networks in Mexico took

advantage of the vacuum left in the drug trade to gain control of cocaine smuggling operations from Colombia into the United States. Consequently, drug-related violence and criminality shifted northwards into Mexican territory as various Mexican trafficking organizations vied for control over the highly lucrative smuggling trade from Colombia and the southern Andes into the large and profitable U.S. market.<sup>23</sup>

Thus, Mexico’s current drug-related bloodbath is, in part, directly attributable to the partial victory in the war on drugs achieved in Colombia in recent years via Plan Colombia. If the U.S.-backed Mérida Initiative presently being implemented in Mexico achieves results similar to those of Plan Colombia, it will not halt drug trafficking or end organized crime in Mexico or in the region. The most likely outcome is that it will both drive further underground in Mexico while also push many smuggling activities and criminal network operations into neighboring countries such as Guatemala and Honduras and back to Colombia and the Andes. Evidence that some Mexican drug trafficking operations (Sinaloa, Zetas) are moving from Mexico into Central America is already abundant.<sup>24</sup>

#### **PROLIFERATION OF AREAS OF CULTIVATION AND SMUGGLING ROUTES (THE BALLOON EFFECT)**

The UNODC 2010 World Drug report indicates that Colombia successfully reduced the total number of hectares under coca cultivation within its national territory in the second half of the 2000s, and despite new increases in 2011, production has still not returned to pre-2000 levels. The true extent of reductions in Colombian coca cultivation in the past three years is a controversial topic, plagued by inadequate data, methodological problems, and major uncertainties regarding the extent of cultivation and yield levels. Given similar caveats, coca cultivation in both Peru and Bolivia, after almost two decades of decline, appears once again

to have expanded.<sup>25</sup> Most observers believe that overall coca leaf production and cocaine availability in the Andean region remain roughly on par with 2000 levels and well above those of 1990 or 1995. Evidently, the balloon effect that allowed coca cultivation to shift north from Bolivia and Peru to Colombia in the 1990s continues to operate as cultivation moved back into Peru and Bolivia from Colombia at the end of the first decade of the 2000s. Various observers have speculated about the possibility that the tropical variety of coca – known in Portuguese as *epadu* – may balloon coca cultivation from its traditional growing areas on the eastern slopes of the Andes into Brazil and elsewhere in the Amazon basin in coming years, if ongoing or renewed eradication efforts prove successful in Colombia, Peru, and Bolivia.

Though the 2010 World Drug report registers a 10 – 20 percent decline in coca production in Colombia from 2008 to 2009, enthusiasm regarding such statistics should be tempered by realism.<sup>26</sup> First, as the figures released in mid-2012 indicate, it is important to note that year-to-year variations are commonplace, with climate factors and short-term disruptions accounting for the changes; declines over several years are required to identify enduring trends. Second, the UN statistics are approximations along a range rather than firm data points; it is entirely possible that the 2010 report underestimates the real levels of production. Third, innovations in more productive hybrid plants, yields-per-hectare, and processing can produce higher levels of refined cocaine production than anticipated by UN analysts. Finally, the ongoing decentralization and dispersion of cultivation in Colombia makes accurate mapping of the total number of hectares under cultivation a very problematic endeavor.<sup>27</sup>

Such caveats aside, the key reason that Colombia appears to have experienced a significant decline in coca production in 2008 and 2009 is that the Uribe government moved away from its almost exclusive (U.S.-backed) reliance on aerial spraying to a more

effective mixture of spraying and manual eradication linked to comprehensive alternative development programs in key coca growing areas such as La Macarena. As a consequence of the weakening of FARC control in vast stretches of rural Colombia and the partial demobilization of the paramilitary bands engaged in drug trafficking over the period 2002 – 2007, 2008 to 2009 marked the beginning of an important decline after at least three years of steady increases in total production. To sustain this decline will certainly require that Colombia continue its manual eradication efforts and that it provide additional funds for well-designed and well-executed alternative development programs in coca growing areas throughout the country.<sup>28</sup>

Meanwhile, recent increases in coca cultivation in both Peru and Bolivia suggest that the focus of U.S. attention and resources on Colombia has led to the neglect of coca cultivation in those traditional coca-growing countries in the central Andes. To forestall a recurrence of the balloon effect – pushing cultivation out of one country only to have it reappear in others – the Obama administration will have to seek to reestablish a workable relation with the government of President Evo Morales in Bolivia and find effective ways to combat the resurgence of *Sendero Luminoso* (Shining Path) and coca cultivation in Peru. Failure to achieve more effective drug control policies in both countries will likely result in a continuing shift of coca production back to Peru and Bolivia, thereby nullifying any real progress made in reducing coca cultivation in Colombia over the medium term.<sup>29</sup>

In the 1980s, largely as a result of the formation of the U.S. government's South Florida Task Force in 1982 – headed by then-Vice President George H. W. Bush – the established Caribbean routes used by the Medellín and Cali cartels in the 1970s and early 1980s were essentially closed down by American law enforcement and military operations. They were quickly replaced over the mid- to late 1980s and early 1990s with new routes that used

Panama and Central America, the Gulf of Mexico, and the Pacific Corridor to reach Mexico and then cross from Mexico into the United States.<sup>30</sup> When the Mexican cartels took over from Medellín and Cali in the late 1990s, the Pacific Corridor became the principal smuggling route northwards from Colombia to the United States, although the Gulf route also remained active.<sup>31</sup> From December 1, 2006 onward, Mexican President Felipe Calderón, with Washington's active assistance since 2008 via the Mérida Initiative, waged an intense military campaign against Mexico's major drug cartels.<sup>32</sup> Although unsuccessful in eliminating Mexico's key drug trafficking groups as of 2010, Calderón's militarization of the "drug war" unquestionably made smuggling across the U.S.-Mexican border from Mexico more dangerous and expensive than in past years. As a result, some Mexican trafficking organizations have begun to move into Central America – especially Guatemala and Honduras – to take advantage of these much weaker states and conduct their smuggling operations.<sup>33</sup>

There is also abundant evidence indicating increased use of both Venezuelan and Ecuadoran territory by Colombian traffickers to replace the increasingly problematic Mexican routes. Venezuela is a jumping-off point for smuggling through the Caribbean to the east coast of the United States or across the Atlantic through West Africa and into Europe. Venezuela is also used for drug flights into Honduras or Guatemala, where the shipments are then transferred to trucks and transported by land across the Guatemalan-Mexican border north into the United States.<sup>34</sup>

The balloon effects produced by the "partial victories" in the "war on drugs" in the Andes on both drug cultivation and drug smuggling routes are evident. Over the past twenty-five years and more, the war on drugs conducted by the United States and its various Latin American and Caribbean allies has succeeded repeatedly in shifting coca cultivation from one area to another in the Andes and in

forcing frequent changes in smuggling routes. It has proven unable to disrupt seriously, much less stop permanently, either production or trafficking in the hemisphere. The traffickers' constant, successful adaptations to law enforcement measures designed to end their activities have led to the progressive contamination of more and more countries in the region by the drug trade and its attendant criminality and violence.<sup>35</sup>

#### **DISPERSION AND FRAGMENTATIONS OF CRIMINAL DRUG TRAFFICKING ORGANIZATIONS (THE COCKROACH EFFECT)**

The differential insertion of individual countries into the political economy of drug trafficking in the hemisphere has produced a variety of forms and types of intermediation between peasant growers of illicit crops and consumers. In Bolivia, the presence of peasant cooperatives in the countryside since the *Movimiento Nacional Revolucionario* (National Revolutionary Movement, or MNR) revolution of 1952 produced coca growers' associations and generally inhibited the rise of either criminal organizations or guerrilla movements as intermediaries, although the Bolivian military itself has on various occasions fulfilled this role.<sup>36</sup> In Peru, the absence of strong grassroots associations among peasant growers opened the way for both elements of the country's military apparatus (led by intelligence chief Vladimiro Montesinos) and guerrilla organizations (*Sendero Luminoso*) to perform the role of intermediaries or traffickers.<sup>37</sup> In Colombia, the absence of both peasant organizations and military intermediaries paved the way for the rise of major criminal organizations such as the Medellín and Cali cartels to fill the role. The demise of the major cartels opened the way for illegal armed actors such as the FARC and the paramilitaries.<sup>38</sup> In Mexico and Central America, elements of the military and/or police have sometimes performed the functions of intermediation in previous decades, but in the 1990s and 2000s, these countries followed

the Colombian pattern of criminal intermediation owing to the absence of strong growers' associations.<sup>39</sup>

In terms of criminal organizations or criminal trafficking networks, Colombia and Mexico provide the two most important examples over the last twenty-five years. In Colombia, the rise and fall of Medellín and Cali (and subsequently the Norte del Valle cartel) vividly illustrate the perils and vulnerabilities of large, hierarchical criminal trafficking organizations, especially when they attempt to confront the state openly. Both major cartels in Colombia were hierarchically structured and proved to be vulnerable targets for Colombian and international law enforcement agencies. In the wake of Medellín and Cali, Colombia witnessed a rapid fragmentation and dispersion of criminal networks that have proven far more difficult for law enforcement authorities to track down and dismantle than their larger and more notorious predecessors.<sup>40</sup> Although there may be counter-tendencies leading to re-concentration among criminal trafficking organizations in Colombia today (e.g., los Rastrojos and las Águilas Negras), the basic lesson to emerge from Colombia appears to be that smaller criminal networks are less vulnerable to law enforcement and state repression. Colombia's emergent *Bandas Criminales* (BACRIM), the descendants of the now formally demobilized paramilitary groups that made up the United Self-Defense Forces of Colombia (*Autodefensas Unidas de Colombia*, AUC) represent a new generation of drug traffickers in Colombia. They differ from the "paras" in several important respects: 1) They tend to be much more deft and subtle in seeking political alliances inside the Colombian economic and political establishment, often hiding their political linkages through indirect contacts and "clean" candidates without records of paramilitary affiliations or ties in the past; 2) They focus on establishing political influence at the municipal and departmental (provincial) levels rather than at the national level; 3) The

locus of their activities includes not only Colombia's Caribbean coast, but also the Pacific southwest; and 4) They have expanded their economic interests beyond drug trafficking to include other illegal activities (land piracy, gold mining, and timber) as well as legal enterprises. From the Colombian state's perspective so far, such organizations are far less threatening because they do not have the capacity to threaten state security directly.<sup>41</sup>

In Mexico, as in Colombia in the 1980s and early 1990s, cocaine profits appear to have energized the country's major criminal networks and unleashed a wave of violence among criminal organizations seeking to strengthen and consolidate their control of key smuggling routes. As of mid-2012, this struggle was still playing itself out in brutal and bloody fashion. Nonetheless, Mexico's criminal trafficking groups do appear to be gradually following the Colombian pattern of dispersion and fragmentation, although the evidence is not yet conclusive. In 2000, the Tijuana cartel (Arrellano Félix family) and the Juárez cartel (Carrillo Fuentes family) were the two largest and most dominant drug trafficking organizations in Mexico. Since 2000, after the Vicente Fox administration first pursued Tijuana and then Juárez, Mexico has seen the rise of at least five new major trafficking organizations, the Sinaloa, Gulf, Familia Michocana, Beltrán-Leyva, and Zetas and a host of smaller, lesser known groups.<sup>42</sup> This dispersion of criminal networks in Mexico may well represent the beginning of the kind of fragmentation observed in Colombia in the 1990s. If it does, the trend would be warmly welcomed by Mexican governing authorities because it would portend a considerable diminution in the capacity of organized criminal networks in Mexico to directly challenge state authority and national security.

A key reason that some analysts do not accept the fragmentation of organized crime thesis in contemporary Mexico relates directly to the emergence of a new criminal network model as evidenced by the Sinaloa cartel. Unlike its predecessors and current

rivals in Mexico, the Sinaloa cartel is less hierarchical and more federative (hub and spokes) in its organizational structure. Its principal leader, Joaquín “El Chapo” Guzmán Loera has forged a new type of “federation” that gives greater autonomy (and profits) to affiliated groups. To date, the Sinaloa cartel, also known as the Federation, seems to be winning the war against its rivals, although its fight against the Zetas (a paramilitary-style organization) is proving to be prolonged, costly, and bloody. It is likely that the Sinaloa model will prove more sustainable and better for business than other criminal trafficking organizational models in Mexico, but the jury is still out.<sup>43</sup>

The escalating urban gang wars in Medellín, Colombia’s Comuna 13 neighborhood exemplify the kinds of violent, internecine conflicts taking

place over many contested drug trafficking areas and routes across the entire Latin American region (e.g., the states of Nuevo León, Chihuahua, Michoacán, and Tamaulipas in Mexico; the Pacific coast of Guatemala; the Valle de Cauca Department near Cali, Colombia; the municipality of Caucaasia in Colombia; or the *favelas* of Rio de Janeiro in Brazil). In Medellín, scores of relatively small, competing drug gangs have generated a pattern of “disorganized” crime: rather than rationally doing what would be “good for business – keeping murder rates low and police attention to a minimum – the criminal world is in turmoil and in need of an arbitrator to re-establish authority.”<sup>44</sup>

Like Mexico, where the splintering of authority has led to the creation of smaller but no less violent groups such as the Cartel de Acapulco and Mano

Table 1. Proliferation of Mexican Cartels, 2006-2010

con Ojos, Colombia's drug gangs are fighting to establish their place in the new criminal hierarchy in Medellín's poor and marginalized barrios long ignored by both the central Colombian state in Bogotá and by Medellín's municipal government. Under former mayor (now governor of Antioquia) Sergio Fajardo, Medellín did see a significant decline in violence rates for several years – especially homicide statistics – via informal negotiations with the gangs as new mayoral initiatives to reduce gang violence (e.g., increased social services, expanded educational opportunities, jobs programs, and new public recreational spaces for youth) and the demobilization of the nation's paramilitary groups in 2005 and beyond. The relative peace achieved

by the Fajardo administration in Medellín and the successor mayoral administration of Alonso Salazar, did, unfortunately, gradually give way to renewed violence in Medellín's Comuna 13 and other urban neighborhoods where drug trafficking and BACRIM activity resurged in 2010 and 2011. Medellín's Comuna 13 and Ciudad Juárez's Rivera del Bravo slums are perfect launching platforms for gang warfare. In such neighborhoods, drug traffickers have found readily accessible pools of new gang members and many potential drug consumers, as well as efficient corridors for smuggling drugs and arms. In Comuna 13, the violence is mainly about controlling the San Juan highway, which leads out of the city to northern Antioquia and Urabá on

Map 2. Mexican Drug Cartel's Main Areas of Influence

Source: STRATFOR, Mexico and the Cartel Wars in 2010, Annual Report 2010, December 16, 2010

Colombia's northern Caribbean coast. The gangs that control the highway decide who and what enter and leave Medellín: drugs, guns, and money. The armed group established by former Medellín *capo* Pablo Escobar, now known as "the Office," remains the largest and most powerful criminal network in Medellín, even though it has splintered into rival factions and neither side has yet managed to achieve control over Comuna 13 and the San Juan transit route.<sup>45</sup>

The *maras* (youth gangs) in Central American countries such as Honduras and Guatemala; the Barrio Azteca prison gang in El Paso, Texas and Juárez, Mexico; and the Comando Vermelho in Rio de Janeiro provide additional examples of the proliferation of gangs or *pandillas* that work and fight often in close association with major cartels and that have appeared along with the phenomenon of fragmentation and dispersion. In 2004, for example, the armed wing of the Juárez Cartel – La Línea – started to attack the local police openly while employing the *cobro de piso* (right-of-way tax) to transit drug shipments through Chihuahua. This tax was possible due to the incorporation of former police officials from Juárez into the ranks of the Juárez cartel. Following the intromission of the Sinaloa Cartel into Juárez in the mid-2000s, rising levels of violence and murder have been commonplace in Juárez, the murder capital of Mexico, involving Los Aztecas, a gang affiliated with La Línea, against opposition gangs such as the Mexicles, the *Artistas Asesinos* (Artistic Assassins), and the *Gente Nueva* (new youth gangs).<sup>46</sup> By October 2005, there were also an estimated 17,000 gang members that belonged to the *Mara Salvatrucha* or MS-13 and the 18th Street operating in Ciudad Juárez.<sup>47</sup> While no recent statistics are available, anecdotal evidence indicates that the numbers of *maras* active in Juárez and Mexico appear to have increased steadily to above 25,000.

As in the Colombian case during the 1980s and 1990s, paramilitary groups have also surfaced in

recent years in Juárez, Monterrey, and other parts of Mexico in response to the cartels and affiliated gang violence. The appearance of these paramilitary bands highlights the weak law enforcement capacities of the Mexican government and its perceived inability to effectively confront and defeat the country's powerful drug trafficking organizations.<sup>48</sup>

Under pressure from Mexican and U.S. law enforcement, Mexican trafficking organizations have, since the mid-2000s if not before, sought to move at least part of their smuggling operations from Mexico into neighboring countries. Guatemala and Honduras are currently targets for both the Sinaloa Cartel and the Zetas.<sup>49</sup> The upsurge in drug-related violence in both of these Central American nations is closely related to these shifts in operational bases. This trend, observable throughout the hemisphere, is sometimes labeled the "cockroach effect", because it is reminiscent of the scurrying of cockroaches out of a dirty kitchen into other places to avoid detection after a light has been turned on them. Closely linked to the "balloon effect," the "cockroach effect" refers specifically to the displacement of criminal networks from one city/state/region to another within a given country or from one country to another in search of safer havens and more pliable state authorities.

#### **FAILURE OF POLITICAL REFORM OR STATE BUILDING (THE DEINSTITUTIONALIZATION EFFECT)**

States determine the form or type of organized crime that can operate and flourish within a given national territory. Criminal organizations, in contrast, do not determine the type of state, although they certainly can deter or inhibit political reform efforts at all levels of a political system. Advanced capitalist democracies – from the United States to Europe to Japan – exhibit wide variations in the types of organized crime they generate and/or tolerate. The United States, for example, has eliminated the Italian mafia model and seen it replaced by

fragmented and widely dispersed domestic criminal organizations, many affiliated with immigrant communities. Europe is characterized by a similar evolution of organized crime groups affiliated with immigrant populations. Japan, in contrast, has coexisted with the Yakuza, a more corporate-style criminal network. In China, state capitalism coexists with the Chinese triads and other criminal organizations. In Russia, the Putin government, in effect, subordinated and incorporated various elements of the Russian mafia as para-state organizations.<sup>50</sup>

In Colombia, the paramilitary organizations, deeply involved in drug trafficking, were linked directly to both state institutions and to specific political parties. In Mexico, the Institutional Revolutionary Party (*Partido Revolucionario Institucional*, PRI) developed almost tributary relations with organized crime groups. When the PRI's almost 71-year monopoly over political power was broken at the national level in 2000 by the victory of National Action Party (*Partido Acción Nacional*, PAN) presidential candidate Vicente Fox, the old lines of tribute/bribery broke down as well, and unleashed a wave of internecine violence among trafficking organizations as they struggled among themselves for control of cocaine transit through their country.<sup>51</sup>

Transitions from authoritarian regimes to more open and democratic forms of governance in Latin America, as in Russia and Eastern Europe, are particularly problematic, because the old, authoritarian institutional controls often collapse or are swept away but cannot be easily or quickly replaced by new, democratic forms of control, at least in the short term. Mexico is currently experiencing such a transition. The old institutions – police, courts, prisons, intelligence agencies, parties, and elections – no longer work. Indeed, they are manifestly corrupt and dysfunctional. Nevertheless, in practice, few new institutional mechanisms have risen to replace them. Moreover, reform efforts can be, and often have been, stymied or derailed entirely

by institutional corruption and criminal violence intended to limit or undermine state authority and the rule of law. There certainly were significant institutional reforms proposed or underway in Mexico at the end of the Felipe Calderón's 2006-2012 term, but there is little question that such reforms have not come fast enough nor have they been sufficiently thorough to contain drug trafficking criminal organizations and related violence and corruption in Mexico.

Such observations do not constitute arguments against democratization. Rather, they highlight challenges and obstacles along the road to democratization that are frequently overlooked or ignored altogether. Democratic theorists have only recently begun to seriously examine the problems for democratic transitions that emanate from organized and entrenched criminal networks. In the countries of Latin America and the Caribbean, such neglect of institutional reform may well imperil both political stability and democracy itself. Rather than democratic consolidation, the consequence of ignoring organized crime and its corrosive effects may well be institutional decay or democratic de-institutionalization. Countries emerging from internal armed conflicts are significantly more vulnerable in this respect, although such conflicts are not the only source of institutional weakness. Transitions from authoritarian to democratic political systems may also engender such institutional deficits even in the absence of prior prolonged internal conflict.

#### **THE INFLEXIBILITY AND INEFFECTIVENESS OF REGIONAL AND INTERNATIONAL DRUG CONTROL POLICIES (REGULATORY FAILURES)**

Reflecting the hegemonic influence of the United States over international drug policy during the post-World War II period, the United Nations (UN) Office on Drugs and Crime and the Organization of American States (OAS) have both faithfully reproduced the U.S. prohibitionist regime at the mul-

tilateral level. The UN's approach to drug control (like that of the OAS) severely limits the flexibility of responses at the level of member states because it effectively rules out any possible experimentation with legalization and/or decriminalization. Both the UN and the OAS parted from the assumption that all illicit drugs are "evil" and must be prohibited and suppressed. In practice, the UN-OAS-U.S. unwavering prohibitionist strategy long dominated international discourse on drug control and prevented individual countries from experimenting with alternative approaches, or forced them to ignore or defy their UN treaty obligations regarding narcotics control.<sup>52</sup> The growing Latin American disaffection with the dominant drug-fighting paradigm exploded into public view at the Summit of the Americas in Cartagena, Colombia, in April 2012. The OAS was tasked with exploring policy options, with a report to be issued in early 2013.

For example, the UN, the OAS, and the United States have, in effect, systematically rejected Bolivian President Evo Morales' declared policy of fostering traditional and commercial uses of legally grown coca leaf while preventing the processing of coca leaf into cocaine in that country. It must, of course, be recognized that coca cultivation in Bolivia did rise significantly in subsequent years beyond the amount that was necessary to supply traditional or ceremonial purposes and even "legal" non-cocaine uses. Similarly, both the U.S. federal government and the UN opposed the November 2010 California ballot initiative that sought (and failed) to legalize marijuana cultivation and commercialization in that state. It is entirely possible that, had the California Proposition 19 initiative on marijuana been approved by the state's voters, it would have run afoul of both U.S. federal statutes and America's UN treaty obligations.

In practice, the UN prohibitionist inclination has meant that there is little or no international backing for options other than the current "war on drugs," no matter what collateral damage is incurred

in the process. The ten-year UN drug policy review of international drug control policies (1998-2008) predictably concluded that the current prohibitionist UN policies in place were the best and only real strategic option available moving forward and generated no significant alterations in international drug control policies and practices, despite growing doubts and questioning among some member states and many independent analysts.<sup>53</sup>

### **THE FAILURE OF U.S. DRUG CONTROL POLICIES**

While the United States has managed to stabilize or even reduce demand for most illicit drugs at home, it most certainly has not eliminated American demand for illicit drugs or the profits associated with supplying the huge U.S. market. Demand control has been routinely underfunded by Washington, while primary emphasis has been almost automatically placed on expensive, but ultimately ineffective, supply-side control strategies. Since 2009, there have been some efforts undertaken by the Obama administration and his Drug Czar Gil Kerlikowske to redress this long-standing imbalance in U.S. drug policy, although prevention and treatment remain woefully underfunded. Analysis of the reasons behind the U.S. insistence on supply over demand control strategies lies beyond the scope of this essay.

The consequences of Washington's strategic choices are, however, obvious. Washington has demanded that the countries of the region follow its lead in the "war on drugs" and, as in previous years, upheld a formal "certification" process that often sanctioned those nations that did not "fully cooperate." U.S. insistence on such a policy approach has not only led to overall failure in the "war on drugs" over the last twenty-five years plus; it has been counterproductive for both U.S. and individual Latin American country interests. The price that Colombia has paid for its role in the "war on drugs" has been high in both blood and treasure. The price that Mexico is being asked to pay

is as high or higher. The high costs associated with failure have generated a reaction to the U.S. strategy both at home and abroad and produced a new debate over alternatives to American prohibitionist approaches such as harm reduction, decriminalization, and legalization.<sup>54</sup>

**THE SEARCH FOR ALTERNATIVES:  
THE DEBATE OVER LEGALIZATION,  
DECRIMINALIZATION, AND HARM REDUCTION**

Some Latin American analysts anticipated that the possible passage of California's Proposition 19 in November 2010 – which sought to legalize the cultivation, distribution, and possession of marijuana in the state – would signal the beginning of the end of the U. S.-led “war on drugs” and allow Mexico and other countries in the region to move away from the “prohibitionist” strategy that has generated so much drug-related violence throughout Latin America and the Caribbean in recent years. Many Latin American political leaders, however, openly oppose the legalization of marijuana in California and stridently argue against the legalization or decriminalization of harder drugs in the United States and around the globe. In the end, Proposition 19 was defeated at the polls by 52 percent opposed versus almost 48 percent in favor among California voters. Undeterred, proponents of marijuana legalization in California are likely to place another Proposition 19-style initiative on the California ballot in November 2012 with the hope of a larger turnout among under-30 voters in a presidential year.

Whether one does or does not favor marijuana legalization in California and beyond, there are many reasons to be skeptical of the real impact of marijuana legalization on drug trafficking and organized crime in California and elsewhere. First, even if such an initiative is ultimately approved in some American states, there are likely to be U.S. federal

government challenges that could delay implementation of any such new state laws for years. Second, legalization of marijuana, if and when it occurs, will not address the issues – production, processing, trafficking, and distribution – raised by the criminal activity, violence, and corruption spawned by trafficking of harder drugs such as cocaine, heroin, and methamphetamines, among others. Criminal gangs in Mexico and elsewhere in the hemisphere will most likely move away from marijuana to deeper involvement in still-illegal drugs; organized crime and drug-related violence will continue. In the long run, as the 2011 Global Commission on Drug Policy report argues, some combination of legalization and/or decriminalization of illicit drugs along with serious harm reduction policies and programs worldwide may well offer the only realistic formula for reducing the illicit profits that drive drug-related crime, violence, and corruption in Latin America and the Caribbean and around the globe, even if addiction rates go up as they did with the end of U.S. alcohol prohibition in the 1930s.<sup>55</sup> Yet, in the short- and medium-term, Latin American and Caribbean countries will have to address their own seriously flawed institutions by ending long-standing corrupt practices; undertaking police, judicial, prison, and other key institutional reforms; and insuring greater electoral accountability. Such measures are essential for their own future political stability, democratic consolidation, and national security and cannot wait for global decriminalization or legalization to take place at some nebulous point in the future. Neither the legalization of marijuana nor the decriminalization of harder drugs, when and if they take place, will constitute panaceas for the resolution of the problems created by proliferating crime, corruption, and violence throughout the region, for they will not do away with the many other types of organized crime that operate with virtual impunity in Latin America and the Caribbean today.

## NOTES

1. The ex-presidents from Brazil, Colombia, and Mexico – Fernando Henrique Cardoso, César Gaviria, and Ernesto Zedillo, respectively – highlight the necessity that the United States and Europe should “design and implement policies leading to an effective reduction in their levels of drug consumption and, as a consequence, in the overall scope of the narcotics criminal activities,” Cardoso et. al., “Limits and Undesirable Effects of Repressive Strategies,” *Drugs and Democracy: Toward a Paradigm Shift, Statement by the Latin American Commission on Drugs and Democracy* (Latin American Initiative on Drugs and Democracy, 2009), 7.
2. United Nations Office on Drugs and Crime (UNODC), *The Globalization of Crime: A Transnational Organized Crime Threat Assessment* (New York: UNODC, 2010), 5- 6. United Nations Office on Drugs and Crime (UNODC), *World Drug Report* (New York: UNODC, 2011), 8.
3. See David F. Musto, *The American Disease: Origins of Narcotic Control* (New York: Oxford University Press, 1999, Third Edition). (First published in 1973 by Yale University Press)
4. UNODC, *World Drug Report* (New York: UNODC, 2010), 87. Note that the five million users of cocaine in the United States are between the ages of 15 and 64.
5. Cocaine demand has been steadily decreasing in the United States since 1982, from an estimated 10.5 million users in 1982 to some 5.3 in 2008. Cocaine users in the 27 EU countries have, however, more than doubled in the past decade, increasing from 2 million in 1998 to 4.1 million in 2008 (4.5 million in all of Europe). UNODC, *World Drug Report* (New York: UNODC, 2010), 16; also UNODC, *The Globalization of Crime* (New York: UNODC, 2010), v-vi and 82. The consumption of cocaine has decreased in the United States to 1.9 percent in 2009 from 2.5 percent in 2006. This information comes from the UNODC, *World Drug Report* (New York: UNODC, 2011), 93.
6. Despite overall declines in total area of coca leaf cultivation in the Andes, cocaine production remained essentially stable from the mid-1990s through 2008 at approximately 800 – 1,100 metric tons. North America, including Canada, accounted for some 40 percent of worldwide cocaine consumption. The European Union and the European Free Trade Area (EFTA) countries consumed more than 25 percent of the world total. Together, these two regions accounted for more than 80 percent of the global cocaine market, estimated at \$88 billion in 2008. UNODC, *The Globalization of Crime*, 82. In 2008, the total value of worldwide cocaine and heroin markets combined was estimated at \$153 billion. UNODC, *World Drug Report* (New York: UNODC, 2010), 19. These statistics are from the UNODC, *World Drug Report* (New York: UNODC, 2011), 119.
7. UNODC, *Afghanistan Opium Survey 2009: Summary Findings*, 2009, 1.
8. UNODC, *World Drug Report* (New York: UNODC, 2011), 71-73.
9. UNODC, *The Globalization of Crime* (New York: UNODC, 2010), 81-82.
10. Some 4.3 – 4.75 million people have used cocaine in Europe as of 2009. UNODC, *World Drug Report* (New York: UNODC, 2011), 86.
11. South America was the third largest consumer market for cocaine in the world in 2008, with some 2.4 million users. The bulk of South American consumption was concentrated in two countries of the Southern Cone, although there was evidence of rising cocaine use in virtually every country in the hemisphere. Given its population of nearly 200 million, Brazil had the largest number of users, over 900,000. Yet, use was most intense in Argentina, where an estimated 2.6 percent of the adult population used cocaine in 2006 – a statistic roughly similar to that of the United States. UNODC, *The Globalization of Crime* (New York: UNODC, 2010), 82.
12. UNODC, *World Drug Report* (New York: UNODC, 2011), 91.

21. On paramilitary demobilization, see Elvira María Restrepo and Bruce Bagley, eds., *La desmovilización de los paramilitares en Colombia: Entre la esperanza y el escepticismo* (Bogotá: Uniandes, 2011). The Uribe government emphasized a counterinsurgency strategy in Plan Colombia, an important difference from the Pastrana government’s original “Plan Marshall.” During 2002-2003, Uribe increased the number of combat troops and pursued constitutional reforms to expand the military activities. Ramírez Lemus, et. al., 111-112.
22. The 62,000 hectares and 73,000 hectares include small fields. UNODC, *World Drug Report* (New York: UNODC, 2011), 100-111; Adam Isacson, “Don’t Call it a Model: On Plan Colombia’s Tenth Anniversary, Claims of ‘Success’ Don’t Stand Up to Scrutiny,” Washington Office on Latin America, July 13, 2010.
23. The U.S. government estimates that the Mexican cartels make \$19 to \$39 billion annually from the drug trade. Drug policy analyst Peter Reuter estimates Mexican cartel drug profits at the much lower figure of \$7 billion per year for 2010. Even at Reuter’s lower estimate level, the profits remain quite substantial and are certainly enough to spur on the intense violence Mexican drug traffickers have exhibited in recent years. Beau Kilmer, Jonathan P. Caulkins, Brittany M. Bond, and Peter H. Reuter, *Reducing Drug Trafficking Revenues and Violence in Mexico: Would Legalizing Marijuana in California Help?* (Santa Monica, CA: RAND Corporation, 2010).

24. The Northern Triangle countries of Central America – Guatemala, Honduras, and El Salvador – have been deeply affected. The intense drug-related violence presents serious challenges to governance. UNODC, *World Drug Report* (New York: UNODC, 2010), 26; Cynthia J. Arnson and Eric Olson, eds., *Organized Crime in Central America* (Washington D.C.: Woodrow Wilson Center for International Scholars, Latin American Program, 2011).

25. From 2009 to 2010, the area under cultivation increased in Peru by two percent. In terms of hectares, the estimates for 2010 are 61,200. Cultivation has varied in Peru based on region; some smaller regions located in the Amazon Basin saw dramatic increases, as much as 90 percent, in terms of the area under cultivation. It is important to note that cocaine production in Peru has been increasing since 2005, according to the UNODC 2011 report. By contrast, Colombia saw a decrease in production in 2010; the 2010 estimate for production is 350 metric tons. For more information, see UNODC, *World Drug Report* (New York: UNODC, 2011), 101. Between 2000 and 2009, coca cultivation increased by 38 percent and 112 percent in Peru and Bolivia, respectively. UNODC, *World Drug Report* (New York: UNODC, 2010), 65. Coca cultivation is, in short, returning to countries where eradication policies damaged the reputation of the United States and U.S. drug control policies and incentivized peasant unrest. Gootenberg, 315.

26. In 2008, Colombia produced 450 metric tons of cocaine, out of a UN estimated 865 metric tons of worldwide production. U.S. government estimates of total cocaine production were higher, ranging up to 1,000 metric tons. Regarding cultivation, there was a decrease in hectares cultivated, from around 80,000 to 68,000 in 2008 – 2009 in Colombia according to the UNODC, *World Drug Report* (New York: UNODC, 2010), 66. Estimates of cocaine production per hectare of cultivated coca are quite unreliable.

27. For a discussion of historical perspectives of the difficulties of quantifying cocaine production, see Gootenberg, 325-336; For a discussion of the difficulties with the UNODC estimates, see Francisco E. Thoumi, “Debates recientes de la Organización de las Naciones Unidas acerca del régimen internacional de drogas: Fundamentos, limitaciones e (im) posibles cambios,” in Juan Gabriel Tokatlian, ed., *Drogas y prohibición: Una vieja Guerra, un nuevo debate* (Buenos Aires: Libros del Zorzal, 2010), 27-56; Francisco E. Thoumi and Ernestine Jensema, “Drug Policies and the Funding of the United Nations Office on Drugs and Crime” in *Global Drug Policy: Building a New Framework* (NY: The Senlis Council, 2004).

28. See Coletta A. Youngers and John M. Walsh, “Development First: A More Humane and Promising Approach to Reducing Cultivation of Crops for Illicit Markets,” Washington Office on Latin America, March 2010; Vanda Felbab-Brown, Joel M. Jutkowitz, Sergio Rivas Ricardo Rocha, James T. Smith, Manuel Supervielle, and Cynthia Watson, “Assessment of the Implementation of the United States Government’s Support for Plan Colombia’s Illicit Crop Reduction Components,” produced for review by the U.S. Agency of International Development (USAID), 17 April 2009; U.S. Government Accountability Office (GAO), “Plan Colombia: Drug Reduction Goals were Not Fully Met, but Security Has Improved: U.S. Agencies need More Detailed Plan for Reducing Assistance,” October 2008; Adam Isacson and Abigail Poe, *After Plan Colombia: Evaluating “Integrated Action: The Next Phase of U.S. Assistance,”* (Washington D. C.: Center for International Policy (CIP), International Policy Report, December 2009).

29. United Nations, *Coca Cultivation Survey June 2009* (New York: United Nations, 2010). “If the current trend continues, Peru will soon overtake Colombia as the world’s biggest coca producer - a notorious status that it has not had since the mid-1990s,” said UNODC Executive Director Antonio Maria Costa. Coca cultivation in Peru increased 6.8 percent in 2009 – from 56,100 hectares in 2008 to 59,900 in 2009. Cultivation of coca in Colombia, however, decreased in 2009 by 16 percent – from 81,000 hectares in 2008 to 68,000 hectares in 2009. Despite Colombia’s apparent decline, overall coca cultivation in the Andean region decreased only 5.2 percent in 2009. According to the UNODC data, cultivation of coca in Bolivia barely changed between 2008 and 2009, increasing only by 400 hectares (about 1 percent – from 30,500 hectares in 2008 to 30,900 in 2009). This UNODC report contradicted the U.S. estimate for Bolivia, which showed a 9.4 percent increase in cultivation between 2008 and 2009 (and a 2009 cultivation estimate that is 4,100 hectares higher than the UNODC estimate). See *Just the Facts: A Civilian’s Guide to U.S. Defense and Security Assistance to Latin America and the Caribbean*, June 23, 2010 <http://justf.org>.

31. This displacement is also confirmed by the fact that Mexican criminal organizations have increased their activities in the United States. By 2008, these organizations had presence in 230 U.S. cities, while three years before, they were present in only 100 cities. Moreover, the Colombian groups now controlled the illicit cocaine and heroin distribution in only 40 cities, mostly in the northeast. UNODC, *World Drug Report* (New York: UNODC, 2010), 79.

42. Luis Astorga Almanza, *Seguridad, traficantes, y militares: El Poder y la sombra* (Mexico City: Tusquets, 2007); Luis Astorga Almanza and David A. Shirk, “Drug Trafficking Organizations and Counter-drug Strategies in the U.S.-Mexican Context,” in Eric L. Olson, David A. Shirk, and Andrew D. Selee, eds., *Shared Responsibility: U.S.-Mexico Policy Options For Confronting Organized Crime* (Washington D.C.: Mexico Institute, Woodrow Wilson International Center for Scholars/San Diego, CA: Trans-Border Institute, 2010). From 1995 onward, several Mexican cartels became progressively more involved in cocaine trafficking out of Colombia. The Tijuana and Juárez cartels started to fight for control of cocaine smuggling routes across Mexico and cross-border plazas into the United States in the vacuum left by the collapse of the major Colombian cartels. Only after 2000, however, did Mexico experience the rise and participation of newer cartels such as the Sinaloa, the Gulf, and the Zetas. See Bruce Bagley and Aline Hernández, “Crimen organizado en México y sus vínculos con Estados Unidos,” in Hans Mathieu and Catalina Niño Guarnizo, eds., *Seguridad Regional en América Latina y el Caribe: Anuario 2010* (Bogotá: Friedrich Ebert Stiftung, 2010), 332-333.

**Private Citizen Members:** Timothy Broas, John T. Casteen III, Charles Cobb Jr., Thelma Duggins, Carlos M. Gutierrez, Susan Hutchison, Barry S. Jackson

### ABOUT THE WOODROW WILSON CENTER

The Center is the living memorial of the United States of America to the nation's twenty-eighth president, Woodrow Wilson. Congress established the Woodrow Wilson Center in 1968 as an international institute for advanced study, symbolizing and strengthening the fruitful relationship between the world of learning and the world of public affairs." The Center opened in 1970 under its own board of trustees.

In all its activities the Woodrow Wilson Center is a nonprofit, nonpartisan organization, supported financially by annual appropriations from Congress, and by the contributions of foundations, corporations, and individuals. Conclusions or opinions expressed in Center publications and programs are those of the authors and speakers and do not necessarily reflect the views of the Center staff, fellows, trustees, advisory groups, or any individuals or organizations that provide financial support to the Center.
