

CO₂ Sequestration in Deep Saline Aquifers

- CO₂ reductions are likely to be larger than demand for EOR.
- Saline aquifers offer massive storage potential.
- No interference with oil and gas operations.
- Can be integrated with pipeline and EOR operations.
- Safe, reliable, measurable.

Alberta Saline Aquifer Project (ASAP)

	2008	2009	2010	2011	2012	2013	2014	2015+
Phase 1 - (\$750 K) - Identify aquifer locations - Design and cost - Clarify legal / regulatory issues - Prepare applications								
Phase 2 - (\$30 - \$50 MM) - Construct and operate the demonstration pilot - 1,000 to 3,000 tonnes / day								
Phase 3 - (\$200 MM) - Expansion to commercial operation - 20,000 tonnes / day
