REGIONAL AND GLOBAL ENERGY SERIES

REGIONAL PERSPECTIVES, GLOBAL SOLUTIONS

The Wilson Center's new Regional and Global Energy Series addresses the growing debate on international energy issues in their security, political, economic, and environmental dimensions.

The past decade has experienced an unprecedented shift in international energy trends. The axis of energy production is shifting from East to West, while energy consumption is shifting from West to East. The implications of these changes require careful examination.

The Regional and Global Energy Series draws upon the Wilson Center's outstanding regional programs and institutes to bring a unique geopolitical perspective on international energy developments and then move toward regionally-oriented global energy strategies.

Deep and comprehensive regional analysis of pressing energy issues — in their economic, environmental, and strategic context — will help analysts, executives and policy makers to better understand and act upon larger global energy trends.

BIMONTHLY OPEN DIALOGUE ON REGIONAL ENERGY ISSUES

Recent and dramatic shifts in global energy patterns have caused a need to rethink the capacity of the existing global energy architecture to address international energy issues and create a more effective strategy to better address current international energy needs.

The bimonthly Regional and Global Energy Series, in cooperation with the Wilson Center's regional programs and institutes, brings experts from the policy, private, and academic sectors to participate in independent, open forum discussions on regional energy issues, as well as a special session on global energy strategy.

ENERGY, ENVIRONMENT, AND SECURITY NEXUS

The bimonthly discussions build on the framework of *Energy and Security: Strategies for a World in Transition*, published by Wilson Center Press and Johns Hopkins University Press, now in its second printing, and co-edited by Wilson Center Public Policy Scholar and energy lead, Jan H. Kalicki, and David L. Goldwyn, President of Goldwyn Global Strategies, LLC. Kalicki and Goldwyn have served five Administrations and have as extensive private sector experience on energy issues.

U.S. Secretary of Energy, Ernest Moniz, at the Wilson Center

Energy and Security: Strategies for a World in Transition presents a coherent and actionable Global Energy Security Strategy with six main points:

- Promote the unconventional energy revolution abroad
- Create a competitive global gas market
- Forge greater coordination of emergency response measures
- Lead a multilateral effort to end energy poverty
- Integrate energy and environmental strategies
- Engage globally and protect sea lanes

The Regional and Global Energy Series is an open resource for decision-makers in all sectors to discuss and debate actionable and research-driven solutions to complex international energy challenges in an open and independent environment.

2014-2015 SCHEDULE

2014

July 1 – Russia/Ukraine

September 17 – China/East Asia

November 6 – North America

2015

January 7 – Global Energy

March 10 – Africa

May 14 – Latin America

July 9 – The Middle East

Below: Public Policy Scholar, Jan Kalicki speaks with out-going Deputy Secretary of Energy, Daniel Poneman
